Electro-Magnetic slow movement interactions (Maxwell conditions):

$$\begin{aligned} \nabla \cdot \epsilon_0 \mathcal{E} = \varrho \qquad \nabla \cdot \mathcal{B} = 0 \quad \nabla \times \mathcal{E} = -\frac{\partial}{\partial t} \mathcal{B} = i\omega \mathcal{B} \qquad \nabla \times \frac{1}{\mu_0} \mathcal{B} = j + \epsilon_0 \frac{\partial}{\partial t} \mathcal{E} = j - i\omega \epsilon_0 \mathcal{E} \\ (1) \end{aligned}$$
